HIMANSHU PARASHAR

DevOps Engineer | AWS | Docker | Kubernetes | Terraform | CI/CD

Noida, Uttar Pradesh, India | +91-8826011625 | himanshuparashar085@gmail.com

https://linkedin.com/in/himanshu-parashar-2b541194 | https://himanshu-profile-devops.vercel.app

PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience in Linux-based systems, cloud infrastructure, Infrastructure as Code (IaC), CI/CD automation, and container orchestration. Skilled in Terraform, Jenkins, GitHub Actions, Ansible, Docker, and Kubernetes to build secure, scalable, and reliable cloud-native platforms. Experienced in implementing DevSecOps practices, automating deployments, and collaborating across development and operations teams in production environments.

TECHNICAL SKILLS

Infrastructure as Code (IaC): Terraform, Terragrunt

Cloud Platforms: AWS (EC2, IAM, CloudWatch, S3, DynamoDB), Azure

Operating Systems: Linux

Configuration Management: Ansible

CI/CD Tools: BuildPiper, Jenkins (Declarative, Scripted, Shared Library, Job DSL), GitHub Actions, Maven

Containers & Orchestration: Docker, Kubernetes

Languages & Frameworks: Go, Java, Python, React.js

Databases: ScyllaDB, PostgreSQL

Caching & Messaging: Redis, Apache Kafka

Monitoring & Logging: Prometheus, Grafana, CloudWatch, VictoriaMetrics

Scripting & Version Control: Bash, Git

Practices: DevSecOps, High Availability, Scalability

PROFESSIONAL EXPERIENCE

DevOps Engineer L2 | OpsTree Global Solutions, Noida

Jan 2026 – Present

Projects:

- AD Ports Group (Azure-based Platform)
- Fincart (Azure-based Fintech Platform)
- PineLabs (AWS-based Payment Solutions)
- Maino.ai (AWS-based AI Platform)

KEY RESPONSIBILITIES

- Designed and implemented end-to-end CI/CD pipelines using Jenkins, GitHub Actions, and BuildPiper across multiple client environments
- Provisioned and managed infrastructure using Terraform: Azure Cloud (Fincart); AWS (PineLabs & Maino.ai)
- Managed Kubernetes clusters, namespaces, RBAC, and production-grade workloads
- Implemented deployment strategies such as blue-green, canary, and rolling deployments
- Integrated DevSecOps practices including SAST, DAST, and container image security scanning
- Automated Docker image builds and streamlined container lifecycle processes
- Monitored applications and infrastructure using VictoriaMetrics, Prometheus, and Grafana
- Improved system scalability, reliability, and deployment efficiency across environments
- Collaborated with development and product teams to standardize CI/CD and release workflows

PROJECT RESPONSIBILITIES

AD Ports Group (Azure-Based Platform)

- Modernized CI/CD pipelines for frontend and backend services by implementing DevSecOps CI checks.

- Modernized Kubernetes configurations to improve consistency, maintainability, and deployment reliability.
- Integrated security practices into application delivery workflows to identify vulnerabilities earlier in the development lifecycle.
- Deployed application code to QA, UAT, and production environments.

Fincart (Azure-Based Fintech Platform)

- Managed CI/CD pipelines and day-to-day DevOps operations.
- Developed a cost-effective AI-powered pull request (PR) review solution using Microsoft Foundry on Azure.
- Managed security updates and monthly virtual machine patching, with a focus on avoiding service downtime.
- Implemented NetBird VPN to provide secure database access.
- Optimized Windows and Linux App Service Plan costs by analyzing workload utilization and selecting appropriately sized SKUs.
- Optimized Azure Storage Account costs by selecting Hot, Cool, and Archive access tiers based on data access patterns.

PineLabs (AWS-Based Payment Solutions)

- Migrated repositories from Bitbucket to GitHub while preserving commit history and validating that all files were transferred.
- Implemented DevSecOps practices and security checks in CI/CD pipelines.

Maino.ai (AWS-Based AI Platform)

- Supported CI/CD, cloud infrastructure, Kubernetes workloads, and deployment reliability across client environments.

DEVOPS ENGINEER | MYGURUKULAM (POWERED BY OPSTREE), NOIDA

Sept 2025 – Jan 2025

Project: BuildPiper – Enterprise DevSecOps Platform

Overview:

BuildPiper is an enterprise-grade Kubernetes and microservices delivery platform enabling automated CI/CD, security controls, and environment governance. The platform was used to support production microservices deployments for clients across fintech, healthcare, e-commerce, and telecom domains, including TransBnk, IndePay, Traya Health, Apna Mart, Nykaa, and Airtel, by standardizing and automating end-to-end delivery workflows.

Key Responsibilities:

- Designed and configured microservice onboarding workflows mapping Git repositories, Docker image builds, and Kubernetes manifests
- Integrated BuildPiper with GitHub Actions to automate CI workflows, Docker builds, and container image vulnerability scanning
- Created deployment pipelines for dev, stage, and prod environments using BuildPiper's native deployment engine
- Configured Kubernetes clusters, namespaces, RBAC, and secure service onboarding policies
- Implemented rolling, canary, and blue-green deployment strategies with automated rollback mechanisms
- Implemented DevSecOps practices by integrating SAST, DAST, and container security scans into CI/CD pipelines
- Monitored application health, logs, and pod-level metrics using BuildPiper dashboards and observability integrations
- Managed artifact versioning, promotions, and environment-specific configurations across multiple microservices
- Collaborated with development teams to standardize Git branching, tagging, and CI/CD workflows

DEVOPS PROJECT | OT-MICROSERVICES

Oct 2024 – Aug 2025

Repository: https://github.com/OT-MICROSERVICES

Overview:

OT-Microservices is a production-grade, cloud-native Employee Management System built using microservices architecture principles, enabling independent service deployment, scalability, and fault isolation.

Microservices & Components:

- attendance-api: Python service with PostgreSQL accessed via middleware
- employee-api: Go service with ScyllaDB accessed via middleware
- salary-api: Java service with ScyllaDB accessed via middleware

- middleware: Redis-based caching and inter-service communication layer
- notification-service: SMTP-based scheduled email alerts
- gateway: Java-based API Gateway for routing and security
- frontend: React.js web application
- webserver: Nginx / Traefik for ingress and traffic management

Key Responsibilities:

- Designed and provisioned cloud infrastructure using Terraform and managed multi-environment configurations with Terragrunt
- Implemented modular Terraform code with remote state management using S3 and DynamoDB locking
- Built CI/CD pipelines using Jenkins and Maven for automated build, test, and deployment workflows
- Developed reusable Ansible roles for Linux-based environments (CentOS and Ubuntu)
- Automated Docker image builds and Kubernetes deployments for all microservices
- Implemented blue-green and canary deployment strategies on AWS
- Enabled Kubernetes autoscaling (HPA) and designed services for high availability and scalability
- Configured Jenkins RBAC, SSO integration, Shared Libraries, and Job DSL for pipeline-as-code
- Containerized and deployed microservices on Kubernetes clusters with centralized monitoring

EARLIER PROFESSIONAL EXPERIENCE

Team Lead / Senior Talent Acquisition Specialist | Transcend Staffing Solutions LLC, Noida

Mar 2022 – Jan 2023

- Led and mentored recruitment teams sourcing for cloud, DevOps, and engineering roles
- Built and managed candidate pipelines through job portals, referrals, and vendor coordination
- Handled full-cycle recruitment from requirement gathering to offer closure
- Worked closely with hiring managers and delivery heads to align hiring needs
- Managed ATS/CRM systems for tracking, compliance, and reporting

Freelance IT Recruiter | Jan 2023 – Oct 2024

Senior Talent Acquisition Associate | Cynet Systems Inc, Noida

Apr 2019 – Mar 2022

- Maintained technology pipelines and identified hiring trends
- Screened, cold-called, and qualified candidates using skill matrices
- Managed full-cycle hiring including interviews, feedback, and reference checks
- Worked on roles including Cloud Engineers, DevOps, Java/.NET/React Developers, QA, and Analysts
- Coordinated with direct clients, vendors, and staffing partners

Talent Acquisition Executive | IVM Global Inc, Trenton, NJ (Remote)

Aug 2017 – Mar 2019

- Independently managed end-to-end recruitment lifecycle
- Conducted screenings, scheduled interviews, and managed feedback loops
- Prepared offer letters, handled negotiations, and ensured closures
- Maintained candidate data using ATS/CRM platforms

Drive Test Engineer | RedMango Analytics Pvt. Ltd.

Sept 2015 – Apr 2017

- Performed network drive tests and optimization for telecom expansion sites
- Identified handover failures, hardware issues, and coverage gaps
- Recommended antenna tilt/orientation changes and interference fixes

EDUCATION

Bachelor of Technology (B.Tech) | Vishveshwarya Group of Institutions | 2011 – 2015

CERTIFICATIONS

- Microsoft Technology Associate (MTA): Database Administration Fundamentals

- DevOps Ninja Certification in DevOps Practices
- Microsoft Certified IT Professional (MCITP): Database Administrator

PROFESSIONAL STRENGTHS

- Infrastructure Automation using Terraform & Terragrunt
- CI/CD Pipeline Design with BuildPiper, Jenkins, GitHub Actions & Maven
- Container Orchestration via Kubernetes & Docker
- Strong cross-functional communication and stakeholder coordination
- Experience across both technical DevOps roles and talent acquisition
